Skills

Frontend Architecture: JavaScript, TypeScript, React.js, Next.js, Redux Toolkit, Tailwind CSS, GSAP

Automation (Personal Lab): GitHub Actions, CI/CD Pipeline Design, Vercel Deployments

Databases: MongoDB, MySQL

Experience

CSS Founder, Frontend UI Developer

June 2024– Present

- Architecting a **scalable ETA Visa** application utilizing Next.js, focusing on optimized web performance, strict TypeScript interfaces, and premium responsive design. Engineering frontend features for **VisitsVisa**, a high-volume platform handling thousands of daily users, driving improvements in core web vitals and overall user retention.
- Managing a dynamic queue of client-facing web products, ensuring timely delivery of **maintainable UI components**, fluid animations, and **robust API integrations**.

GET WEB INDIA, Frontend UI Developer

Jan 2023 - Apr 2024 (1.4 yr)

- Implementing **performance optimizations** & best practices to ensure fast, efficient, and reliable applications
- Developing and maintaining **pixel-perfect UI components** that not only align precisely with design specifications but also enhance usability, interactivity, and overall **visual appeal**, ensuring users enjoy a seamless digital experience.

MyGrowthacking, Frontend UI Developer | Intern

Oct 2022 – Dec 2022 (3 months)

- Learned modern frontend development practices, reusable components, and **clean coding standards** while working on real projects.
 - Worked with designers and developers to convert UI designs into **interactive web interfaces**.
-

Projects

ETA Visa ([link](#))

- Engineered using **Next.js** and **TypeScript**, this high-performance platform streamlines travel documentation intake with a focus on modern component architecture and clean state management.
- I drastically minimized initial **page load times** by leveraging Static Site Generation (**SSG**) and dynamic route lazy-loading, ensuring instantaneous UI responsiveness even on slower mobile edge networks.

SiteChecking ([link](#))

- A responsive site-testing utility developed using **React** and **Tailwind CSS** to help developers audit layout responsiveness and performance across multiple viewports simultaneously. To maximize speed, I engineered a highly optimized **DOM structure with lazy-loaded components**, drastically dropping the initial page load time and improving **Core Web Vitals**.

UserBoard ([link](#))

- A high-performance, responsive enterprise **UI clone engineered** with **JavaScript (ES6)** and **advanced CSS architecture** to deliver seamless interactive workflows. I minimized **asset blocking** overhead and fine-tuned DOM painting pathways, successfully **reducing page load times** while maintaining smooth, hardware-accelerated scroll animations.

Visitsvisa ([link](#))

- A private tourism agency dedicated to making travel simple, secure, and hassle-free. Slashed critical-path rendering latency to ensure a fast, stable, and pixel-perfect application flow on all devices.

Stylam ([link](#))

- Created user-friendly web interfaces for Stylam, **Asia's largest Laminate Sheet manufacturer**, with a strong focus on intuitive navigation.
